> **Fact-checked 20 Oct 2026 (about 09:30 Sydney), 21 corrections + 1 (scale factor, 20 Oct register)** (AI fact-check, Claude Code). Every change is listed in `oct20/verify_tnakit2/verify_tnakit2.md`. All 19 Oct numbers re-ran identically from the scripts; the 20 Oct curve was not yet published. Still AI research: not for submission. **Consistency pass 20 Oct (`oct20/consistency/consistency_audit.md`; log `oct20/consistency/fixes_applied.md`):** the IBTR "enough" claim is limited to the fee-free bases; option 1's payment-short caveat added; top-up odds, the IBTM payout date, the 13-word clause, quote lengths and the scale wording fixed; note editability marked as assumed.

TNA fact kits v2: VT, IBTR, IBTM (for the three student authors)

AI-generated research (Claude Code, built Tue 20 Oct 2026, about 09:10 Sydney). **Not for submission.** This kit is bullets, numbers, questions and traps only, so nothing in it can be pasted in as a reflection. If you use a fact from it, the team records the AI help in the AI-use log and the Final Report's Works Cited. Wharton: "You may not submit any work generated by an AI program as your own" and "If you use AI to assist you in any way during the competition, how you use it must be recorded in your Works Cited pages" (https://globalyouth.wharton.upenn.edu/ai-policy/, competition section, read 19 Oct; copy `oct19/office/web/ai_policy_2026-10-19.txt:377`).

Deadline: Fri 23 Oct 5:00 pm ET = Sat 24 Oct 08:00 Sydney. Team target: submit Thu 22 Oct Sydney. Submission is "via the SurveyMonkey Apply form" (TNA:54).

What changed vs v1 (19 Oct)

A. Numbers moved to the 19 Oct close (source: `oct20/numbers/numbers_refresh.md` §2-4 and §9c; MODEL unless stated):

1. IBTR room (basis D): **$297,162 / $2,838 / 9.8bp** on 19 Oct, up from $298,940 / $1,060 / 3.6bp on 16 Oct. Row added to table 2E.
2. Other bases (2E) replaced with 19 Oct: A $293,001, B $293,767, C $296,399, E $294,437.
3. Odds of costing more than $300k on 1 Jan 2027: **41% on D** (38-43% for any volatility), was 47%. A 30%, E 34%.
4. New: odds the line is crossed before the TNA goes in (by the 21 Oct close): **about 1 in 10**.
5. Yield change since the trade (2E) now 6 → 19 Oct: long end fell about 0.12-0.16 points, not "about 0.2". The 19 Oct curve is published; 20 Oct is not (as of the numbers run).
6. Required-return margin (2D): **0.10-0.13 points** on 19 Oct (was 0.03-0.06 on 16 Oct).
7. Floor after a half-point fall (D3): **about $137-138k** on 19 Oct (was about $136k). Floor cost in Jan 2028 $116,485, leaving $33,515 for VT (1C, 3E).
8. New: the coupon study's own sizing now prices the ladder at $298,446, so the IBTR note's "her first $300,000 is enough" is true on bases A-E and the coupon-study sizing (all fee-free) at the 19 Oct close; on maturity sizing with the 0.07% iBond fund fee the ladder is about $300.4-300.7k and a top-up is needed in about half of model paths (REC banner (3); VP2 row 3). Do not say "true on every basis" (2E). [consistency fix 20 Oct, row 2]
9. VT 19 Oct close 157.11; IBTM 32.45% of the 19 Oct book (traps and 3E).

B. Corrections from `oct19/verify/*.md`:

1. **IPS V5 run labels fixed.** v1 swapped some "accepted" and "pending" labels. Now checked against the .docx parse (`oct19/verify/dl/base_v5.txt` = accepted; `pend_v5.txt` = pending v12). Affects D1, D2, D6, 1E, 2F, 3D, 3E.
2. **D1 (VT's jobs):** two jobs in the accepted IPS, three in the pending wording ("retains the other half for flexibility" is **pending only**).
3. **D2 (2042 first):** the two reasons conflict **only if the pending v12 IPS is accepted**. The accepted IPS and both AI reflections give "most rate-sensitive".
4. **D2 and 2H (order of WInS entries):** the first placement round, filled orders included, did run 2042 → 2033. Only four orders were cancelled and re-placed later. Full sequence now in Part 0.
5. **D5 and 2H:** V5 contains **no "$292,000"** (that figure is in V4/Tab 15 and in the pending AI IBTR reflection).
6. **"Holdings basis" defined correctly:** $50k zero-coupon at each holding's maturity date, not the holdings' real cash flows (D5, 2E).
7. **Ladder figures are method-sensitive:** an independent pricer gave $1.1k-$2.4k of room on 16 Oct; on 19 Oct it agrees with D within $4-93.

8. **288 characters is no test:** three notes are 288 characters: VT, the cancelled IBTR note and the filled Nov-2041 bond note. The filled IBTR note's 294 is shared with the IBTO note (2A, common checks; recounted 20 Oct).
9. **"Character 182" is 0-based:** the first difference between the two IBTR notes is the **183rd** character (2G).
10. **Accepted AI IBTR reflection:** "This note first warned of a 0.3-point fall" is literally false. The executed note never said 0.3 (2G, 2H).
11. Floor "half-point fall" method is slightly optimistic (the top-up is paid a year later), so the figure is rounded to "about $137-138k" (D3).
12. "Payment-cover chain fails" overstated. Restated as: leftover plus Laura's half does not cover the whole shortfall in 6.5-8.0% of paths, typical gap about $3k. In the number-sheet model no payment is missed, but only because money above the floor is used (REG F9). On the agreed basis, option 1 leaves some payment short in about 1 path in 7 (14-15%, worst about $10k), or about 1.6% (worst about $7k) if Laura's retained half stays on call after 2033 (REC §5; VP2 banner). Not TNA content (D1). [consistency fix 20 Oct, row 3]
13. Sheet "Trade #" values are wrong. By order time the filled picks are IBTM #6, IBTR #10, VT #11 (common checks).
14. The "Don't use AI for personal reflection" line is general coursework guidance, not a competition rule (common checks).
15. IBTM weight "about 32.4-32.6%"; weights drift up to about 0.2 points from cost.

C. Client language added (`oct20/client/client_deep.md` §3, §4c, §7; case re-read 20 Oct):

1. New shared page **Part 0b: case words** (swap list as concepts, not sentences).
2. The payments go "toward the residency's operating expenses" (case:88). They are not artists' wages; artists are one of five groups (case:78-79).
3. "creative residency in Taiwan" (case:76-77), which she "plans to establish" (case:76); not "her Taiwan residency" and not "opens in 2033".
4. **Risk capacity split by goal:** high for money beyond the payments; none for the payment money (1F, 2F).
5. The 2028 deposit has **four** sources and the case says "will" (case:43-45). Frame it as timing, not doubt (1F, 2F, D6).
6. "facility", never "building"; "facility contribution", not "gift" (the VT note says "gift"; 1H).
7. Backstops must stay inside the portfolio (case:91-92). The accepted V5's "covered by her other assets" is a trap (2H, D1).
8. Theme coverage across the trio (TNA:5-6), plus the per-kit pointers from client_deep §7.

D. Timeline facts added (`oct20/timeline/timeline.md` rows 44, 48, 51-55, 81; TP5, TP6, G7-G9):

1. First recorded order: **6 Oct 7:55:45 PM ET** (Nov-2041 bond), after the US close. No order is recorded on the planned Fri 2 Oct, and no note-bearing order during the 6 Oct US session (the WInS Trade Notes page lists only orders with notes).
2. All four cancelled and re-placed orders, with times. The IBTR re-placement was the last of them.
3. The live FAQ now names STRIPS as not permitted (seen 19 Oct; 3D).
4. The note wording drew on AI EXAMPLE notes (Sheet Trading Notes tab, "Exemplar note" column, 30 Sep AI run). The 6 Oct "AUDIT REVIEW — 6 OCT 2026" AI drafts share very little wording with the three picks (L05 F-14: 0-9%; re-measured 20 Oct: 0-4%). Both are AI-use items for the TNA itself.

How to use it

1. First read the shared pages (Part 0 and Part 0b). Their items are decisions the whole team logs before anyone drafts.
2. Read your own kit, close this file and the AI exemplars, and write from memory and your own notes.
3. Answer your six self-test questions out loud. If you can't, you are not ready to write.
4. Mark your draft against the checklist at the end of your kit.

"MODEL" means a computed estimate, not a fact. "UNVERIFIED" means no record confirms it.

The official instructions (applies to all three; quote lines, TNA)

- Task: "select three investment decisions that best illustrate your team's strategic thinking. Explain the reasoning behind each decision, how it aligned with, tested, or refined your overall investment strategy, and how it supported the client's goals, funding needs, or risk considerations." (TNA:11-13)
- Hard rules:
  - "Select three (3) Trading Notes from trades your team executed in WInS." (TNA:42)
  - "Include each Trading Note exactly as it appears in WInS." (TNA:44)
  - "For EACH Trading Note, write a reflection of 100 words or fewer explaining:" (TNA:46)
  - "Why your team made the investment decision." (TNA:48)
  - "How the decision aligned with your overall investment strategy." (TNA:50)
  - "How the decision supported the client's goals, funding needs, or risk considerations." (TNA:52)
  - "The Trading Notes must correspond to trades executed in WInS. Yes, we will verify this." (TNA:53)
- What Wharton says it values:
  - "The focus should be on the quality of your reasoning and the intended role of each decision, not simply whether an investment gained or lost value during the competition." (TNA:15-16)
  - "Collectively, the decisions should demonstrate how your team used individual investments as part of a cohesive portfolio strategy." (TNA:14-15)
  - Themes listed: "growth, risk, liquidity, funding reliability, financial flexibility, and future cash-flow needs" (TNA:5-6)
  - Not expected yet: "calculate the final size of the operating reserve, complete long-term portfolio projections, determine Laura's facility contribution, or draft her communication to co-sponsors" (TNA:20-22)
  - Consistency: "The analysis should be consistent with the strategic approach your team is developing and will later articulate in its IPS." (TNA:30-31)
- Guide: each note's "expected role in growth, liquidity, risk management, or future funding" (GUIDE:85-86). Reflect on how decisions "supported, tested, or refined your strategy" (GUIDE:88-89).
- WInS page: notes "should record the reasoning, research, and intended strategic role of each decision at the time it is made" (WINSP:43).
- Trading page on time zones: "You are not expected to stay awake during the night to trade. Orders may be entered while the U.S. market is closed and will be filled when the market reopens." (TRD:52). Next line: "The competition does not require frequent or same-day trading." (TRD:53; also on the live page, TRDL:55)
- **Prompt drift:** the Doc tab "Trading Note Reflection" says "goals, objectives, or constraints" (IPS file line 69). The official words are "goals, funding needs, or risk considerations" (TNA:52). Write to the official ones (VER #12).

Part 0. Shared page: decisions the team must log before anyone drafts

All three reflections must say the same thing as each other and as the IPS the team will submit on 6 Nov. TNA:30-31 and the Investment Strategy criterion check this, because all deliverables are judged together. Each item below is a **decision, not wording**. Log the outcome, date and names in Notes & Discussions. The record shows none of these decided yet (`oct19/notes/decision_log.md` section D; no Caplet Drive file changed after 18 Oct 11:49 Sydney, TL §2).

Timing facts all three authors share (TL rows 44, 51-55; WNX:14-40; times ET as WInS shows them)

- **Planned trading day Fri 2 Oct: no order recorded.** Why it slipped: not recorded (TL G6).
- **First recorded order: 6 Oct 7:55:45 PM ET** (Nov-2041 bond) = Wed 7 Oct 10:55 AM Sydney. It came after the 6 Oct US close. No note-bearing order was placed during the 6 Oct US session (TL row 50).
- **First round, 6 Oct ET, ten orders from 2042 backwards:**

Order	Time (ET)	Status
Nov-2041 bond	7:55:45 PM	filled
Nov-2040 bond	7:59:20 PM	filled
Nov-2039 bond	8:02:40 PM	cancelled
May-2038 bond	8:13:31 PM	cancelled
Feb-2037 bond	8:17:20 PM	cancelled
IBTR ("0.3" note)	8:31:27 PM	cancelled
IBTQ	8:36:15 PM	filled
IBTP	8:45:09 PM	filled
IBTO	9:58:19 PM	filled
IBTM	**10:01:41 PM**	filled

- **Re-placed orders, with edited notes:**

Order	Time (ET)	Note change
Nov-2039	6 Oct 11:45:04 PM	"scaled 2040 payment" → "$50,000 payment on 1 Jan 2040"
May-2038	7 Oct 12:22:11 AM	identical note (the AI-browser mis-click cancellation, COMP:192-193)
Feb-2037	7 Oct 12:24:09 AM	dropped "only"
IBTR	**7 Oct 4:42:53 AM**	"more than 0.3" → "more than about 0.2"

- **Then VT, 7 Oct 8:27:19 PM ET**, the last of the 11 filled orders.
- **By order time among the 11 filled orders:** IBTM is #6, IBTR #10, VT #11 (VER #15).
- **Fill times are UNVERIFIED.** Rule: "Orders placed while the market is closed are filled at the security's opening price when the market reopens." (TRD:33). The ETF fills match the opens: IBTM 21.65 = 7 Oct open; IBTR 23.24 vs 7 Oct open 23.23 (one cent off); VT 158.83 = 8 Oct open (VER #25; Yahoo, re-checked 20 Oct). Read the fill dates from WInS Transaction History and screenshot it (TL G9).
- **Who placed each order:** "placed by Ray" is only in COMP:172 (AI-written). An AI browser also worked the WInS screens. Who clicked or typed each order: not recorded (TL row 51).
- **Who wrote each note, and why each re-placement happened:** not recorded (TL G8). Only a student's memory can fill this; if nobody remembers, leave it out.

D1. What is VT's role: one job or several?

- **WInS VT note (cannot be edited: assumed, not confirmed; treat as final) [consistency fix 20 Oct, row 18]:** "They only set how far her gift rises above her promised minimum." (WNX:14)
- **The IPS V5 gives the equity fund more than one job** (VER #18; run labels checked against the .docx):

Job	Accepted text [acc]	Pending v12 [pend]
Top of the 2031 range	"The upper bound adds half … payment shortfall her half cannot cover." [consistency fix 20 Oct, row 24]	"Its upper bound adds half … less any expected payment shortfall."

Job	Accepted text [acc]	Pending v12 [pend]
Backstop for an uncovered payment	"an uncovered payment is funded from her retained equity"	"an uncovered payment is funded from the equity Laura retains"
Reinvestment shortfall	"$21,000 short, covered by Laura's half before the floor"	"about $21,000 short, met from her retained equity"
Laura's kept half for flexibility	absent	"retains the other half for flexibility"

- Count: **two jobs [acc], three [pend]**. Either way the note's "only" is wrong.
- **Outside-money trap in the same IPS:** [acc] line 25 says a shortfall "is covered by her other assets, with the floor used last". The case bars outside money: "Teams may not rely on co-sponsors, grants, program fees, or other outside funding" (CASE:91-92). [pend] says "her other holdings" (CD §4c).
- **Can the kept half really back a gap?** MODEL, 19 Oct (NUM §4b):
- What Laura keeps in 2033: p5 **$0**, median $25.6k (D) to $29.5k (A).
- The leftover plus her half does not cover the whole coupon shortfall in **6.5-8.0% of paths**, median gap about $3.1-3.2k. Part of the money above the floor is then needed. In the number-sheet model no payment is missed, but only because money above the floor is used (REG F9; VNO N12). On the agreed basis, option 1 leaves some payment short in about 1 path in 7 (14-15%, worst about $10k), or about 1.6% (worst about $7k) if Laura's retained half stays on call after 2033 (REC §5; VP2 banner). Not TNA content. [consistency fix 20 Oct, row 3]
- The $21k (permanent 2-point fall) and the p5 kept half come from different scenarios (VIP #63). Any "covered by Laura's half" claim is a model claim, not a certainty.
- **Tab 15 (AI text in the Doc):** "The other half stays with Laura as a cushion if costs rise or co-sponsors fall short." It also asks where the ~$8k 2027 leftover sits: in VT or in Treasuries (IPS lines 275, 287). "Stays with Laura" reads as money leaving the portfolio (CD §4c).
- **Options for the team:**
- (a) VT is growth above the floor only. The IPS then must drop the backstop lines.
- (b) VT is growth plus Laura's kept half (flexibility and/or a backstop). The VT reflection then has to correct the note's "only" honestly, and the backstop half must stay inside the portfolio.
- **Knock-on:** the VT reflection's "fit with strategy" depends on this, and so does the IBTR reflection's "who covers a gap".

D2. Why does the ladder start with the 2042 payment?

- **IPS V5 line 27 gives two reasons in its two runs:**
  - [acc] "beginning with 2042, the most rate-sensitive"
  - [pend] "beginning with 2042, so any shortfall falls on near payments the 2028 deposit can still fund"
  - Both AI reflections in the Doc (IPS line 86) give the same reason: accepted "the most distant payments are the most rate-sensitive"; pending "the most distant payments are the most sensitive to rates".
  - **So the conflict exists only if the pending v12 IPS is accepted** (VER #17).
- **Facts behind both** (rough assistant arithmetic, **16 Oct** par yields used as zero rates, valuation 1 Jan 2027; not re-run on 19 Oct; rates analyst to re-check):

Rung	Cost	Cost change per 0.01-point yield move	Per $1,000 invested
2033	~$37.3k	~$22	~$0.59
2037	~$30.2k	~$30	~$0.98
2042	~$22.9k	~$33	~$1.46

- **The other WInS notes already lean on the second reason:** the IBTO note says "this is one of the first payments we would top up if yields fall before January" (WNX:20).
- **What WInS shows** (timing facts above; VIP #52):
  - The first round of ten orders, filled ones included, ran 2042 → 2033.
  - Four of them were cancelled and re-placed between 11:45 PM and 4:42 AM ET, so the filled IBTR order came after IBTM.
  - "From 2042 backwards" is true of the first round, not of the filled orders.

- **Scope:** the rule applies to Laura's real purchase on 1 Jan 2027. WInS shows the plan as of 2 Jan 2028 scaled down (SH portfolio.md R2). Decide whether any reflection mentions the order of WInS entries at all.
- **Decide:** one reason, both reasons, or the claim left out of the TNA.

D3. Floor rounding: what is quoted, rounded down from what, and by how much?

- **IPS V5 line 29:** [acc] "The lower bound is the floor, rounded down because a fund's payout is not fixed." [pend] says the same idea. Neither run gives a number or a method.
- **Other readings in circulation:**
  - "rounded down after any expected shortfall" (COMP:158). Tab 15 says this can be read two ways: a payment shortfall or an IBTM payout shortfall (IPS line 285).
  - "quoted at the 2032 ETF's projected payout rounded down" (Tab 15, AI, IPS line 275)
  - "$150,000 face, quoted as $145,000", an AI number-sheet candidate on an unmerged branch (16 Oct review, `research/assistant_review_2026-10/04_What_Stops_Us_Winning_16Oct2026.md:631`). Not a team decision.
  - The model rule behind "$145k": bottom = (2028 floor money − $3,700), rounded down to $5k. It gives $145k only while the 1 Jan 2027 ladder costs under about **$301,300** (NUM §4b; VNO N10).
- **AI reflection claim:** "a few thousand dollars below IBTM's expected value. The minimum she quotes is one she already owns." (accepted AI reflection, IPS line 95; the pending run joins the two with "so"). AI text, not a team decision.
- **Facts:**
  - iShares: "The Funds' distributions and liquidation proceeds are not predictable at the time of investment and the Funds do not seek to return any predetermined amount." (ISH:850)
  - MODEL, **19 Oct**: if reinvestment rates fall for good by 1/2/3/4 points, a $150k floor pays **$149.2k / $148.4k / $147.6k / $146.8k** (NUM §4a).
  - MODEL, **19 Oct**: a half-point yield fall before Jan 2027 cuts the floor to **about $138k** (D), via a ladder top-up (NUM §4a). The method slightly understates the top-up, by about one year's interest (VNO N9). So say "about $137-138k", dated.
  - The pending V5's "about $136,000" (IPS line 30, [pend] only) is a **16 Oct** figure.
  - MODEL, 19 Oct: the $145k bottom survives to 2031 in **61% (D) to 72% (A)** of paths (was 56-67%).
- **TNA rule:** facility figures are not expected (TNA:20-22). The reflections need the **principle**, not a dollar figure.
- **Decide:**
  - What the bottom of the range is anchored to: target, projected payout or face.
  - Whether rounding covers fund uncertainty only, or also a ladder top-up.
  - Whether any TNA reflection mentions rounding at all.

D4. Who absorbs a ladder top-up: the floor or VT?

- **The notes and the IPS:**
  - IBTR note: "the 2028 deposit would top up the ladder, leaving less for the facility" (WNX:15)
  - IPS V5 line 27 [both]: if the cost exceeds $300,000 the 2028 deposit completes the ladder first; "Its remainder buys the floor". The balance then goes into one global equity index fund. On that order, the floor shrinks first.
  - AI reflection: "the facility floor, not the payments, absorbs the difference" (IPS line 86). AI text.
- **Two readings of the floor rule (L05 F-03):**
  - Fixed $150k floor: VT absorbs the whole gap.
  - "Sized to return the remainder": the floor absorbs most of it and VT about a fifth.
- **Size of the stake, MODEL, 19 Oct (NUM §4a, §3):**
  - Without a top-up, the floor costs $116,485 in Jan 2028 (forward yield 5.12%), leaving $33,515 for VT.
  - Chance a top-up is needed: about two in five on basis D (19 Oct, fee-free); about half on maturity sizing with the fund fee (VP2 row 3). [consistency fix 20 Oct, row 15]
- **Decide:** one reading, the same in the IBTR, IBTM and VT reflections and in the IPS.

D5. The ladder number: one date and one basis, or none

- **What the note's "about 0.2" is:** basis D. Each payment is priced as a $50k zero-coupon amount at the maturity date of the holding that serves it, with yields unchanged to 1 Jan 2027.
  - It is **not** the holdings' real cash flows (VER #20). Don't call it "the bonds and funds Caplet holds".
  - On 6 Oct: $293,453, room $6,547, 23.0bp.

- **Where other figures come from:**
  - V5 contains **no "$292,000"** (VER #19). That 25 Sep figure is in V4/Tab 15.
  - Both AI IBTR reflections use "$292,000 to $298,000" (IPS line 86). That is basis C, forward (6 Oct $292,388 → 15 Oct $297,847), so it mixes bases with the note's D-basis "0.2" (VER #21; VNO N15).
- **The level moves faster than the room:**
  - On 19 Oct (D) the room is $2,838, about **1.75 typical days' moves**. The daily SD was $1,616 over the last 21 days (NUM §2).
  - Any level quoted on Thu 22 Oct will already be stale.
  - NUM's rule: quote no level in the TNA or IPS; state the rule.
- **Method:** on 16 Oct an independent pricer put the room at $1.1k-$2.4k (4-8bp) (VER #20). On 19 Oct it agrees with D within $4-93 (NUM §1). Any figure is a MODEL.
- **Next data:** the 20 Oct close was not published at the numbers run. It is expected about Wed 21 Oct morning Sydney (UNVERIFIED). Re-run: `sh oct20/numbers/scripts/run_all.sh 10/20/2026`.
- **Decide:** a curve date, the basis, and the wording for **both** outcomes, above and below $300k. Or decide to give no dollar figure.

D6. Smaller items to settle at the same meeting

- **The IPS line "the 2027 deposit alone is sized for the payments"** ([both], IPS line 26):
  - On D (fee-free basis) [consistency fix 20 Oct, row 2], the first deposit covers the ladder by $2,838 on 19 Oct, with a 41% chance it won't by January (MODEL, NUM §9f).
  - It stays true only through the top-up rule. It must not contradict the IBTR note.
- **The reason given for that line:** [both] "depends on publishing and speaking income".
  - It drops "licensing, and other entrepreneurial ventures" (CASE:44-45).
  - The case says she "will contribute" (CASE:43-44).
  - The judges liked the rule; the reason reads as doubt. Decide whether the team frames it as **timing** (not yet received when the first purchase is made) (CD insight 1, §6 item 4).
- **The scale statement**, once: WInS = Laura's 2 Jan 2028 plan (after both deposits, about $465k) scaled down to $300k, about 0.64-0.65 (numbers register H5). Do not write "300/450": that is the ratio of the deposits, not of the plan's value. M14 §5 item 6 suggests putting it in IBTR only.
- **Decision type per pick (TNA:12; GUIDE:89):**
  - Suggested earlier: IBTR tested, IBTM refined (only if D7 below is confirmed), VT aligned/supported (L05 table, rows G1).
  - The labels are optional (L05 F-06). The logic still has to show.
- **Words the IPS uses that the reflections must not contradict:**
  - "Because the floor is owned" ([both], IPS line 29) and "Promise only what is owned" ([acc] heading line).
  - Both are risky next to "payout not fixed". Decide whether "owned" stays in the IPS. If it goes, it goes from the reflections too.
- **AI disclosure:**
  - The executed note wording drew on AI EXAMPLE notes (Sheet Trading Notes tab, "Exemplar note" column; team checker overlap VT 28%, IBTM 30%, IBTR 2%, M14 §5 item 4). The same tab also holds "AUDIT REVIEW — 6 OCT 2026" with a "Proposed note — AI draft, not saved in WInS" for each order (TL row 48), but those drafts share almost no wording with the three picks (L05 F-14). Log both.
  - **Added 20 Oct (oct20/verify_tl_exp/verify_tl_exp.md T12/X8):** the filed **VT** note (a TNA pick) contains a **13-word clause copied word for word** from the public 30 Sep AI EXAMPLE notes (`rab/trades/notes.md`, last changed 30 Sep 17:06 AEST, before the orders); so does the Nov-2040 note. No note is a whole-note copy. Whatever the team writes about AI use must say this plainly; the note itself cannot be changed.
  - The VT note's last clause matches the AI exemplar word for word (VER #36).
  - AI tools printed suggested note wording for IBTR.
  - An AI browser worked the WInS screens and caused the May-2038 cancellation (COMP:192-193).
  - The TNA has no citation ban. Decide whether and where the team acknowledges AI use for the TNA (L05 F-15; TL L11-L12: "Needed for the TNA itself").
- **What happens to the [AI] reflections in the Doc tab "Trading Note Reflection":**
  - All six texts (3 accepted v11, 3 pending v12) are AI exemplar text verbatim (VER #9-10; VIP #6-7).

- Reject the pending ones, then move the rest to a labelled AI tab or delete them before drafting. Never just strip the tag.

- **D7. When the 6 Oct email arrived**, compared with the IBTM order at 10/06 10:01:41 PM ET.
  - This decides whether IBTM can be called "refined".
  - The email is not in the repo, on the Caplet Drive, or in the Gmail checked (UNVERIFIED; VER #44; TL G7).

Part 0b. Shared page: case words (concepts to use; students choose their own words)

Source: CD §4a-4c and §7, case lines re-read 20 Oct. **This is a list of concepts and case lines, not text.**

Found in team or AI drafts	Problem	Case concept to use instead
"artists" as the people the payments go to ("pay her artists", "$50,000 artist payments", "the artists would bear the loss")	Misreads the payments; artists are one of five groups	Payments "toward the residency's operating expenses" (CASE:88). Users: "artists, writers, designers, entrepreneurs, and educators" (CASE:78-79)
"her Taiwan residency"	Can be read as her own residence status	"creative residency in Taiwan" (CASE:76-77)
"opens in 2033"	States a plan as fact	She "plans to establish" it in 2033 (CASE:76)
"building", "building minimum"	Not in the case (0 times)	"facility" (CASE:83-85)
"gift", "donation", "promised minimum" (the VT note says "her gift" and "promised minimum")	Not case language; "promised" overclaims	"facility contribution"; a "credible range" (CASE:116)
"capacity for risk is high" (no qualifier)	Ignores the payment constraint	Split by goal: high for money beyond the payments (long horizon, living costs met outside, CASE:61-65); none for the payment money (fixed, dated, portfolio-only, CASE:90-92)
"depends on publishing and speaking income"	Drops two of four sources; reads as doubt	Four sources, and "will contribute" (CASE:43-45); not yet received in Jan 2027
"covered by her other assets", "stays with Laura"	Outside money / money leaving the portfolio	Backstops stay inside the portfolio (CASE:91-92)
"cannot miss", "guarantee"	Absolute words are themselves an over-promise	A stated confidence level (CASE:117-118, Final Report)
Flexibility as money for her living costs	Living costs are covered outside the portfolio	Flexibility "as the project develops" (CASE:102-103)
"Laura says / Laura wants / Laura would feel"	Invented voice	Restate a case line only (e.g. she "wants to communicate a credible range", CASE:115-116). The pull quote is the case's words, not hers

- **Useful case lines** (ideas to restate, quote sparingly):
  - "reliable support for its early operations" (CASE:83)
  - "an appropriate balance between pursuing growth and protecting the capital required for her goals" (CASE:72-74)
  - "willing to take thoughtful risks throughout her entrepreneurial career" (CASE:69-71)
  - "committing all remaining assets could limit her financial flexibility as the project develops" (CASE:102-103)
  - "If Laura promises more than she can ultimately contribute, she could damage her credibility and lose the confidence or participation of co-sponsors" (CASE:114-115)
  - "before making the first operating payment or contributing to the facility" (CASE:94): the case's own priority order
- **Theme coverage across the three reflections (TNA:5-6):** growth (VT), risk (all), liquidity (IBTM's cash arrives about 17 days before the first payment), funding reliability (IBTR, IBTM), financial flexibility (VT, if D1 gives the kept half that job), future cash-flow needs (IBTR). Check the trio together, not one by one.
- **Per-kit pointers (CD §7):**

- VT: the case's "balance" (CASE:72-74) and flexibility "as the project develops" (CASE:103).
- IBTM: the over-promise risk (CASE:114-115).
- All three: "facility", never "building"; no "artists" as payment recipients.

- **Questions to ask each author:**
  - Is each client claim in the case? Would Laura be comfortable reading it about herself?
  - Does it help "earn her confidence"? That is the Client Knowledge criterion's wording (`smapply_public_2026-10-14/deliverables.txt:56`).

Kit 1: VT (Vanguard Total World Stock ETF)

1A. The exact WInS note (quote only from WInS on the day)

`Growth: Vanguard Total World Stock ETF holds about 10,000 stocks at a 0.06% fee, so one cheap fund diversifies Laura's stocks. They only set how far her gift rises above her promised minimum. A fall can shrink the extra, and a rise before 2031 lifts the top of the range co-sponsors hear.`

- 288 characters, 52 words, plain ASCII (straight apostrophes). Source WNX:14; also SH tn_analysis.md R5. Both copies match character for character (re-counted 20 Oct).
- The "Growth:" prefix is part of the note. Keep it.
- **288 is not a unique check:** the cancelled IBTR note and the filled Nov-2041 bond note are also 288 characters (VER #13; recounted 20 Oct). Check the ticker, the order time and the opening words.

1B. Order and fill

- **Order as WInS shows it:** 10/07/2026 08:27:19 PM (ET), buy VT (WNX:14).
  - For your memory only, never in the submission: Thu 8 Oct 11:27 AM Sydney (AEDT; checked with zoneinfo 20 Oct).
- **Last of the 11 filled orders** (#11 by order time). Placed after every payment holding and IBTM (WNX:14-24). The Sheet planned it that way: "Listed in WInS; buy after the bonds fill" (SH portfolio.md R30).
- **Fill:** 167 shares at 158.83 (COMP:186).
  - Cost $26,524.61 plus $25 commission, 8.84% of the $300,000 (assistant arithmetic).
  - The plan ticket said 164 shares (SH portfolio.md R30; trading_notes R15 brief), and the 6 Oct audit said "size from actual cash (<=164 shares)". Why 167 were bought is not recorded (UNVERIFIED).
- **Fill time: UNVERIFIED.** No Transaction History export or screenshot is in any file.
  - Rule: "Orders placed while the market is closed are filled at the security's opening price when the market reopens." (TRD:33)
  - The 158.83 fill equals the 8 Oct open (PX; VER #25), so the fill was probably at the 8 Oct open. If the form asks for an execution date, read it from WInS Transaction History.

1C. What VT is, in plain words

- **One index fund** holding stocks of companies worldwide: developed and emerging markets, large and small companies.
- **Holdings and fee:**
  - Fee 0.06% a year, 10,242 holdings (stockanalysis.com/etf/vt, read 19 Oct; PX). Also 10,180 on 16 Oct (L05 F-14).
  - The note's "about 10,000" holds.
- **The only stock holding** in the WInS book and in Laura's plan (COMP:151-161).
- **Size in Laura's real plan:** bought in Jan 2028 with what is left of the $150k deposit after the ladder (and any top-up) and the floor.
  - MODEL, 19 Oct: $33,515 if there is no top-up and no leftover. Typical Jan 2028 mix 66.5% payment Treasuries / 24.4-24.7% floor / 1.2% leftover / **6.9-7.0% VT** of about $465k (NUM §4a-4b).
  - VT value on 2 Jan 2028, MODEL: p5 about $20.3-20.8k, median $32.3-32.6k, p95 $42.8-42.9k (NUM §4a).
  - The repo's "~9%" (COMP:156) is the WInS share at cost. "About $40k" (ND:103) is an older STRIPS-era figure.

1D. Facts for "why" (the reasoning)

- **Breadth and cost:** one fund, ~10,000 companies, 0.06% (above).
- **Size first, fund second:** the strategy buys the payments and the floor first, and stocks get the remainder (IPS line 27 [both]: the balance goes into one global equity index fund; [acc] says "one diversified global equity index fund").

- **Wharton on diversification:** "There is no required sector allocation or minimum number of sectors. However, diversification remains an important investment principle." Teams "may consider diversification across asset classes, sectors, industries, market capitalizations, geographic regions, risk characteristics, and funding purposes." (TRD:48-49)
- **Alternatives considered:**
  - **Student challenge, 5 Oct:** Darren argued the world fund is a "copout" and proposed normal stock and ETF picking; Taiwan (EWT) and gold (GLD) were raised. "Outcome and reasons: [fill in]" (J:23). **The outcome is not recorded** (TL TP4, G12). Write the team's real answer, or leave it out.
  - **AI research memo, 30 Sep:** "Decision: keep VT." It compared VT with VTI+VXUS, US-only, a small/value tilt, and gold+REITs; "No alternative moves the bad case by more than about $1,500 either way" (`/home/user/snap/main/rab/decisions/D_fund_choice.md`). Caveats:
  - It is AI work.
  - It predates the 6 Oct email, so it probably used the STRIPS-era basis (the memo does not say; UNVERIFIED).
  - No team vote on it is recorded.
- **Return assumption the IPS uses:** "assumed to return 7% a year" (IPS line 27 [both]). Source: J.P. Morgan 2026 LTCMA, AC World equity 7.00% compound (16.78% volatility), data as of 30 Sep 2025 (CLAUDE.md "Key facts"). This is a forecast assumption, not a promise.

1E. Facts for "fit with strategy"

- **Root-and-Branch:** VT is the "branch"; the payments and floor are the "roots". Only the [pend] pitch says this outright ("buys the roots first", "the growing branch"); the [acc] pitch gives the name and "One global equity fund grows the rest" (IPS line 23).
- **The 2031 range:** top = floor + half the equity fund's value, less an expected payment shortfall (IPS line 29, both runs). [acc] limits it to the shortfall "her half cannot cover"; [pend] says "any expected payment shortfall".
- **Rise or fall before 2031:** this moves only the top of the range; the floor holding is separate.
- **After 2031:** the 2033 contribution is capped at the upper bound (IPS line 29 [both]).
- **Laura's kept half:** see shared item D1. The accepted IPS gives it a backstop job; only the pending one adds "flexibility". Your reflection must match D1.
- **Stress figure, MODEL, 19 Oct:** a 40% world-stock fall during 2032 takes a typical contribution from about $170.5k to $163.2k (NUM §4b). V5's "$169,000 to $162,000" is fine as rounding. This is a Final Report number, not a TNA one (TNA:20-22).
- **Trade-off the IPS states:** [acc] "Putting the floor in equities would raise the expected contribution ..." (IPS line 30) [pend] "Holding the floor in equities ... so it remains in Treasuries." [consistency fix 20 Oct, row 24]

1F. Facts for "client goals / funding / risk"

- **Case lines:**
  - "willing to take thoughtful risks throughout her entrepreneurial career" (CASE:69-71)
  - She "wants her investment team to recommend an appropriate balance between pursuing growth and protecting the capital required for her goals" (CASE:71-74)
  - Flexibility: "committing all remaining assets could limit her financial flexibility as the project develops" (CASE:102-103). Flexibility is for the **project**; her living costs are covered elsewhere (CASE:61-63).
  - Credibility: "If Laura promises more than she can ultimately contribute, she could damage her credibility" (CASE:114)
- **Capacity split by goal (CD insight 2):**
  - Inputs for capacity beyond the payments: living costs are covered outside the portfolio (CASE:61-63); no withdrawals before 2033 (CASE:63-65); the horizon runs to 2033.
  - The payment money has no capacity for market risk: fixed $50k (CASE:90), portfolio-only, "high degree of certainty" (CASE:91-92).
  - So VT sits only in money the payments do not need. The [pend] IPS says this ("only money the payments do not need bears market risk"); the [acc] says only "Laura's capacity for risk is high".
- **The 2028 deposit:** from "publishing advances, speaking engagements, licensing, and other entrepreneurial ventures" (CASE:44-45), and she "will contribute" it (CASE:43-44). A student question in ND:237-239: "Income sources cancel out the stock?" No answer is recorded.
- **Payments:** they are not funded by VT, so a stock fall does not touch them ([acc] IPS line 29: "No payment changes").

1G. What the team actually decided, and when (records only)

- **Late Sep:** the strategy changed to "a bought Treasury floor plus a world fund, with gift = floor + half the fund"; "[who argued what]" is blank (J:16).
- **1 Oct:** "model check backed the $150k floor and 50/50 split; IPS content locked" (J:21). No names or votes. TL notes that "locked" is not a turning point on the record: the V5 wording was later replaced by AI exemplar v11 (TL §3).
- **5 Oct:** Darren's "copout" challenge; outcome blank (J:23).
- **~29 Sep, undated:** WInS book (ii)R chosen, i.e. Laura's 2028 plan scaled to $300k: "That's why it includes 8.7% in VT" (ND:307). Who decided is not recorded.
- **7 Oct 08:27:19 PM ET:** VT ordered (WNX:14).
- **Not recorded anywhere:**
  - who wrote the VT note, and whether the AI-drafted note in the Sheet was its source (TL row 48);
  - who voted for VT as a TNA pick;
  - who the VT author is (SH tn_analysis.md: Owner column blank).

1H. Traps

- **"They only set..."** contradicts IPS V5, which gives the kept half a job in both runs (D1). "They" also has no clear subject. Don't repeat it; deal with it.
- **"promised minimum" and "gift":**
  - "Promised" overclaims: the payout is not fixed, and the case asks for a credible range, not a promise (CASE:115-116).
  - "Gift" is not case language; the case says facility contribution.
  - Don't echo either. If you mention them, correct them.
- **The note's last clause is AI wording.** The note's last clause contains a 13-word run (VTE T12/X8 and AI-use register count; the earlier "12 words" counted "co-sponsors" as one word) copied word for word from the 30 Sep AI EXAMPLE notes: "a rise before 2031 lifts the top of the range co-sponsors hear" [consistency fix 20 Oct, row 23]. It also matches the AI exemplar in the Sheet (SH trading_notes, row VT, "Exemplar note" column; VER #36).
  - The team's checker gave VT a 28% overlap, a warning (M14 §5 item 4).
  - Disclose this; don't reuse more exemplar wording in the reflection.
- **Don't call the WInS book "Laura's portfolio"** or VT "Laura's stocks" as if she owned VT in 2026. In her real plan, VT is bought in Jan 2028.
- **"stays with Laura":** reads as money leaving the portfolio. If the kept half backs payments, it stays invested in the portfolio (CASE:91-92).
- **Gains and losses:** never cite VT's WInS gain or loss. VT closed 157.11 on 19 Oct against the 158.83 fill (−$287 on the position; NUM §7). That is not the point (TNA:15-16).
- **Return forecasts:** none beyond the IPS's stated 7% assumption. If you use it, name it as an assumption.
- **Sizes:** don't quote "~9%" as Laura's plan. That is the WInS share (8.84% at cost; 8.65% of the 19 Oct book). Her plan is about 7% (MODEL, 19 Oct).
- **"Diversified" vs "safe":** diversification spreads company risk, not market risk. Don't imply VT cannot fall a lot; a 40% fall is the IPS's own stress case (IPS line 29).
- **No dollar figures:** no 2031 range, contribution or reserve (TNA:20-22).
- **Don't invent the outcome** of Darren's challenge.
- **No identity themes:** don't link the fund choice to Laura's heritage, Taiwan or China exposure (CD §3 failed candidates).

1I. Self-test questions (answer aloud)

1. Why one world fund and not picked stocks, EWT or gold? What did the team actually conclude on 5 Oct, and who argued what?
2. What does VT do for Laura that the Treasuries can't, and what can it never do for her payments?
3. Which part of the 2031 range does VT move, and what happens to a rise in VT after 2031?
4. What is "Laura's half" for? Does your answer match D1 and whichever IPS run the team keeps? Does that money stay inside the portfolio?
5. Why is VT 8.8% of the WInS book but only about 7% of Laura's real plan?
6. A judge says "promised minimum" and "gift" in your note overclaim. What do you say?

1J. Self-mark checklist (VT)

- [ ] Note pasted from the WInS Trade Notes page as plain text; 288 characters; "Growth:" kept; straight apostrophes; it is the VT row (not one of the two other 288-character notes: the cancelled IBTR and the Nov-2041 bond).
- [ ] 100 words or fewer by Google Docs and by a hand count (aim for 95 or fewer).
- [ ] Answers all three official questions: why, fit with strategy, client goals/funding/risk.
- [ ] Gives the reason for one fund, and mentions an alternative only if the team really decided it.
- [ ] Deals with the note's "They only set…", "gift" and "promised" without repeating any of them as true.
- [ ] VT's role matches D1 and the IPS run the team will submit.
- [ ] Uses the case's balance idea or flexibility "as the project develops" (Part 0b), in your own words.
- [ ] Contains no WInS gain or loss, no return forecast, and no 2031/2033 dollar figure.
- [ ] Contains none of: guaranteed, risk-free, safe, locked, secured, promised (unless corrected), never, cannot miss, gift, building, artists (as payment recipients).
- [ ] Links to at least one of the other two picks (payments first, then floor, then growth).
- [ ] Every number has a date and a basis.
- [ ] Your own words: no sentence from the AI exemplars, the [AI] Doc text or this kit.

Kit 2: IBTR (iShares iBonds Dec 2036 Term Treasury ETF)

2A. The exact WInS note (quote the 04:42:53 AM order only)

`Future funding: IBTR is for Laura's fifth payment in 2037. On the 6 Oct Treasury curve, her first $300,000 is enough to buy Treasuries for all ten payments. If yields fall more than about 0.2 percentage points by January, the 2028 deposit would top up the ladder, leaving less for the facility.`

- 294 characters, 52 words, plain ASCII. Source WNX:15; SH tn_analysis.md R6 matches (re-counted 20 Oct).
- **Cancelled-order trap:** the cancelled order (10/06/2026 08:31:27 PM) has a 288-character note that says "more than 0.3 percentage points" (WNX:37).
  - If your IBTR paste is 288 characters long or contains "0.3", it is the wrong note.
  - Length alone is no test (VT and the Nov-2041 bond note are also 288; the IBTO note is also 294). Check for "about 0.2" and the 04:42:53 AM time (VER #13).

2B. Order and fill

- **Order as WInS shows it:** 10/07/2026 04:42:53 AM (ET), buy IBTR (WNX:15).
  - For your memory only: Wed 7 Oct 7:42 PM Sydney.
  - It is the last of the four re-placed orders, and #10 of the 11 filled orders by order time.
  - It was placed before the 7 Oct US open, so it should have filled at the open (TRD:33).
- **The earlier IBTR order** at 10/06/2026 08:31:27 PM ET was cancelled (WNX:33-37).
- **Fill:** 853 shares at 23.24 (COMP:180).
  - Cost $19,823.72 plus $25, 6.61% of $300k (arithmetic).
  - The 7 Oct open was 23.23, one cent different, unexplained (PX; VER #25).
- **Fill time: UNVERIFIED** (no Transaction History record). Read it from WInS if the form asks.

2C. What IBTR is, in plain words

- **An exchange-traded fund** holding US Treasuries that mature during 2036 (repo brief "4 Treasuries maturing in 2036", from iShares on 28 Sep, SH trading_notes R5; not re-checked since).
- **When it ends:**
  - iBonds funds "will terminate on or about October or December 15 of the year in each Fund's name" (iShares disclosure, ISH:849). For IBTR that is about 15 Dec 2036, about 17 days before the 1 Jan 2037 payment.
  - Near the end the fund moves into cash-like holdings (ISH:849).
- **Not a bond:**
  - "Unlike a direct investment in a bond that has a level coupon payment and a fixed payment at maturity, the Fund(s) will make distributions of income that vary over time" (ISH:849).
  - Its final payout is not fixed (ISH:850).

- **Why a fund here:**
  - WInS lists no US Treasury bond maturing between 15 Feb 2031 and 15 Feb 2036 (SH wins_notes.md R18; J:18). That explains the funds for the 2033-36 payments, **not IBTR by itself**: WInS did list the 4.5% Treasury maturing 15 Feb 2036 (912810FT0), which could serve the 1 Jan 2037 payment and is the recorded alternative (2D; SH trading_notes R5 and R13, stale WInS price on 29 Sep). Why IBTR was preferred is not recorded.
  - The Feb-2037 bond matures after 1 Jan 2037, so it cannot pay the 2037 payment (SH trading_notes R37 brief).
- **Liquidity:** the thinnest of the iBonds held, about $38m in assets on 28 Sep (repo brief, SH trading_notes R5; not re-checked).
  - 30 Sep: "IBTR's order ticket errored and after-hours iBond spreads were very wide, so we plan limit orders and a retry in market hours" (J:20).
  - The filled order was still placed outside market hours (4:42 AM ET). Whether it was a limit order is not recorded.

2D. Facts for "why"

- **Its job:** IBTR covers payment 5 of 10 (1 Jan 2037) in a ladder that covers each payment with a holding maturing before it (IPS line 25).
- **The alternative on record:** the 4.5% Feb-2036 bond. Per the AI audit: "92.0% vs 88.1% fixed cash, no fee or NAV risk, +$1.4k upfront", and its WInS price was stale on 29 Sep. The team's choice and reasons are not recorded (SH trading_notes R5, audit columns; AI).
- **Why buy now rather than wait:**
  - The payments are fixed dollars (CASE:90).
  - IPS V5 [both]: "The payments require a 5.1% annual return on the 2027 deposit"; "Treasuries currently yield about 5.15%" (IPS line 26).
  - NUM §4c, 19 Oct: the required return is **5.087%** (case-derived; it does not change). Ladder IRR is 5.186% (D) / 5.213% (C) / 5.282% (E) / 5.333% (A). **Margin 0.10-0.13 points on D/C**; it was 0.03-0.06 on 16 Oct. The margin moved 0.07 points in one trading day, so date it if you use it.
  - V5's "about 5.15%" is undated. On 16 Oct it matched the model ladder yield (VIP #58). On 19 Oct it equals the 10-year par yield (5.15) by coincidence. It is not today's ladder yield.
- **The test written into the note before the fill:** "If yields fall more than about 0.2 percentage points by January". The note is a rule set in advance (L05 F-08).

2E. Facts for "fit with strategy" (the test, with numbers)

- **Ladder cost on 1 Jan 2027 on the note's own basis** (basis D: $50k zero-coupon at each holding's maturity date, yields unchanged; MODEL; NUM §2):

Close	Cost	Room under $300k	Fall that uses it up
6 Oct	$293,453	$6,547	23.0bp ("about 0.2")
13 Oct	$295,295	$4,705	16bp
14 Oct	$295,993	$4,007	14bp
15 Oct	$298,628	$1,372	4.7bp
16 Oct	$298,940	$1,060	3.6bp
19 Oct	**$297,162**	**$2,838**	**9.8bp**

- **The note's line was not crossed at any published close 6-19 Oct** (NUM §2). The tightest was 16 Oct, 3.6bp.
- **The same day on other bases (19 Oct, NUM §2):**

Basis	Cost	Room	Fall that uses it up
A: payment dates, forward	$293,001	$6,999	24bp
B: payment dates, yields unchanged	$293,767	$6,233	21bp
C: holdings' dates, forward	$296,399	$3,601	12bp
E: coupon basis	$294,437	$5,563	19bp

  - The coupon study's own sizing gives $298,446, $1,554 under. On 16 Oct it was $174 over (NUM §6).
  - So "her first $300,000 is enough" is **true on bases A-E and the coupon-study sizing (all fee-free) at the 19 Oct close**, by $1.5k-$7.0k depending on basis. On maturity sizing with the 0.07% iBond fund fee the ladder is about

$300.4-300.7k and a top-up is needed in about half of model paths (REC banner (3); VP2 row 3). Do not say "true on every basis". [consistency fix 20 Oct, row 2]

- **Pick one basis and say which** (D5).
- **Yields since the trade, 6 → 19 Oct (treasury.gov par curve):**

Maturity	6 Oct	19 Oct	Change
1y	4.46	4.50	+0.04
2y	4.79	4.77	−0.02
5y	5.03	4.94	−0.09
7y	5.15	5.04	−0.11
10y	5.27	5.15	−0.12
20y	5.68	5.53	−0.15
30y	5.64	5.48	−0.16

- The long end fell about 0.12-0.16 points. 6 → 16 Oct it had fallen about 0.17-0.21 points at 7-30 years (VER #22). Long yields rose about 0.06 points on 19 Oct.
- 20 Oct is not published (as of the numbers run).
- **Sensitivity:** about $290 per 0.01 point (DV01 $288-291, 19 Oct).
- **How big a normal day is (basis D, 2026; NUM §2):**
- SD $1,365 over the year, $1,616 over the last 21 days.
- The room is about **1.75 typical days**.
- A one-day move bigger than $2,838 happened on 4% of days in 2026.
- **Odds (MODEL, NUM §3):**
- The cost ends above $300k on 1 Jan 2027 in about **41%** of modelled paths on basis D at 19 Oct (38-43% for volatility 0.71-1.2 points a year). A is 30%, E 34%. On 16 Oct, D was 47%.
- **Odds of crossing before the TNA goes in** (by the 21 Oct close): 2 days 6-14% measured at the 21 Oct close; 7-16% that either the 20 Oct or the 21 Oct close is over the line (σ 0.71-1.0, re-derived 20 Oct). About **1 in 10**. Prepare wording plans for both outcomes anyway.
- **Context fact:** in 2026 the ladder cost more than $300k on **182 of 200 trading days** (D; under every day since 23 Sep). On A it was 173 of 200, under since 10 Sep (NUM §2). The "cheapest since May 2002" claim stays UNVERIFIED.
- **The rule if the line is crossed:** [acc] "If the cost exceeds $300,000, the 2028 deposit completes the ladder first"; [pend] "...that deposit completes the ladder first" (IPS line 27). The facility side gets less; which part shrinks is D4.
- **The note's test is "by January":** a crossing in October is not the test result. The test is the cost on the day Laura buys.
- **Scale:** in WInS the payment holdings cost about $197k, about two-thirds of Laura's Jan 2027 ladder per rung; the whole book is her post-2028 plan scaled by about 0.64 (REG H5; not 300/450) [consistency fix 20 Oct, row 25] (L05 F-20; SH portfolio.md R2). Say this once (D6).

2F. Facts for "client goals / funding / risk"

- **Case:** "All ten payments must be funded by the investment portfolio with a high degree of certainty. Teams may not rely on co-sponsors, grants, program fees, or other outside funding" (CASE:91-92).
- **What the payments are for:** "toward the residency's operating expenses" (CASE:88). The case also speaks of "reliable support for its early operations" (CASE:83). Not artists' pay (Part 0b).
- **Risk named:** [pend] "the main risks are falling yields" (IPS line 30). [acc] names "lower reinvestment rates" as the main risk beyond a US default. Either way, falling yields before the January purchase make the ladder dearer.
- **Who bears it:** under the IPS rule, the facility side, not the payments (IPS line 27; D4).
- **The 2028 deposit as backstop:**
  - It comes from four income sources and she "will contribute" it (CASE:43-45).
  - The risk is timing (not received when the first purchase is made) or size. There is no team record of a smaller-deposit case; question only.
  - Don't frame her income as unstable; the case calls her business "successful" (CD §3 failed candidates).
- **Backstops stay inside the portfolio:** [acc] V5's "covered by her other assets" (IPS line 25) breaks CASE:91-92 if echoed.

- **Liquidity timing:** the fund ends about 17 days before the payment it serves (ISH:849 date rule).

2G. What the team actually decided, and when (records only)

- **29 Sep:** iBonds chosen for 2033-37 because WInS has no 2031-36 bonds (J:18). An AI memo had proposed iBond ETFs on 25 Sep, so "we discovered" needs care (TL TP3).
- **30 Sep:** IBTR ticket error; plan for limit orders and a market-hours retry (J:20).
- **6 Oct 08:31:27 PM ET:** first IBTR order with the "0.3" note, later cancelled (WNX:37).
- **7 Oct 04:42:53 AM ET:** IBTR re-placed with the "about 0.2" note; filled (WNX:15; COMP:172, 180).
- **The "0.3 to 0.2" story: UNVERIFIED.** No team record says why the order was cancelled or why the number changed. What the records do show:
  - The two notes differ only in "0.3" vs "about 0.2". The first difference is the **183rd character** (0-based index 182; re-checked 20 Oct; VNO O5).
  - **Four orders were cancelled and re-placed** (Part 0 timing table):
  - May-2038: identical note. This is the one cancellation attributed to an AI-browser mis-click (COMP:192-193).
  - IBTR, Feb-2037 and Nov-2039: each re-placed note was **edited**.
  - Notes "cannot be edited, only added" (COMP:84; assumed, not confirmed: treat as final, VTR E12) [consistency fix 20 Oct, row 18]. So cancelling an open order was the only way to change a note. That is a plausible reason; no record confirms it.
  - **The reconstruction is also UNVERIFIED.** It says "0.3" came from a repo tool that printed "Words for the IBTR note" on a "Nov-15 zero-coupon basis" (`/home/user/snap/main/rab/trades/refresh_tickets.py:426-440, 896-903`), and "0.2" from the WInS-listed basis (M14 §4). If true, an AI-built tool suggested the note's threshold words: an AI-use log item.
  - **The accepted AI reflection** (IPS line 86) says "This note first warned of a 0.3-point fall ..." and that the test was then cut to 0.2 [consistency fix 20 Oct, row 24].
  - It is **AI text, not a record**.
  - It is literally false: the executed note never said 0.3; the cancelled order's note did (VIP #53).
  - The reason given is the AI's own inference. So is the judges' Q34 premise (`oct19/judges/qa_bank.md:49`).
  - **Rule:** tell the story only if a student remembers it and the team logs it. M14 §5 item 5 decided to keep it out of the TNA.
- **The "we did not trade" claim:**
  - True: WInS shows 11 trades and none after 7 Oct (COMP:172).
  - **No team record logs a dated check and a "hold" decision.** "Plan: hold, no more trades": who decided is not recorded (TL row 55). Trigger B was never ratified, and it is written on the STRIPS basis (L05 F-03; decision log D8).
  - If you say the team checked and held, log the checks first.
- **Not recorded:**
  - who wrote the IBTR note;
  - who voted for IBTR as a pick;
  - who the author is (SH tn_analysis.md Owner blank).

2H. Traps

- **Quoting the cancelled note** (288 characters, "0.3").
- **"Triggered", "crossed", "the test failed"** without a date and a basis. On 19 Oct the line is not crossed (room 9.8bp on D). The odds of crossing by the 21 Oct close are about 1 in 10. Prepare both outcomes (L05 F-01).
- **Stale "almost gone" claims:** "room fell to almost nothing" / "0.23 → 0.04" is a 16 Oct statement. On 19 Oct it is 0.23 → 0.10. Date it or drop it (NUM §9c).
- **Mixing bases:**
  - "0.2" is basis D; the AI drafts' "$292k to $298k" is basis C (VER #21).
  - V5 has no "$292,000". Don't import the V4/Tab 15 figure.
- **"buy Treasuries" for IBTR itself:** it is a fund of Treasuries whose payout is not fixed. Don't say "matched", "locked", "secured" or "owns".
- **"We bought the ladder from 2042 backwards" about WInS:** true of the first round, not of the filled IBTR, which was re-placed after IBTM (D2).
- **"This note first warned of 0.3"** (accepted AI reflection): false as written.

- **Good-news framing:** never present WInS bond gains from falling yields as good news. In Laura's real plan, lower yields make her January purchase dearer (L05 F-01; NUM §7). Never cite WInS P&L.
- **The ladder cost is not the operating reserve's size.** Give no reserve figure (TNA:20-21).
- **Adding a new WInS note to the IBTR trade now:** don't (L05 F-05).
- **Contradicting the IPS line** "the 2027 deposit alone is sized for the payments" without the team deciding D6.
- **"bp" or "percentage points":** give a plain gloss once; judges are not all bond people.
- **"pays the artists" / "her Taiwan residency" / "covered by her other assets" / "depends on her publishing income":** see Part 0b.

2I. Self-test questions (answer aloud)

1. Why is the 2037 payment held in a fund and not the WInS-listed 4.5% Feb-2036 bond? What did WInS list and not list, and what did the team actually decide?
2. What exactly does "about 0.2 percentage points" measure? On which basis, from which day's curve, and to which date?
3. What was the room on the latest close you have? What is your plan if it has turned negative by 22 Oct, and what if it has not?
4. If the January cost is above $300k, what happens, in order? Which part of Laura's money gets smaller: the floor or VT (D4)?
5. Why did the team buy the payments now instead of easing into bonds as 2033 approaches, like Wharton's example note (TNA:36-39)?
6. Why are there two IBTR notes, and what do you actually know (not guess) about the change from 0.3 to 0.2?

2J. Self-mark checklist (IBTR)

- [ ] Note pasted from the WInS page for the 10/07/2026 04:42:53 AM order: 294 characters, contains "about 0.2", no "0.3".
- [ ] 100 words or fewer by two counters (aim for 95 or fewer; "$300,000", "1 Jan 2037" and "0.2" count differently).
- [ ] Answers why, fit with strategy, and client goals/funding/risk.
- [ ] Any number has its date and basis, on the basis the team chose in D5. No mixed bases; no 16 Oct figure presented as current.
- [ ] Wording works whichever way the line falls; no "triggered".
- [ ] Says who absorbs a top-up the same way as D4, the IBTM and VT reflections, and the IPS.
- [ ] Scale statement included if the team put it here (D6), and stated once.
- [ ] No "0.3 to 0.2" story unless a student remembers it and it is logged.
- [ ] No "we checked and held" unless the checks are logged with dates.
- [ ] Payments described as going toward operating expenses; any backstop stays inside the portfolio; the 2028 deposit framed as timing, not doubt.
- [ ] Contains none of: guaranteed, risk-free, locked, matched, secured, owns, cannot miss; no reserve size; no WInS gain.
- [ ] Your own words; nothing from the [AI] Doc reflections, the exemplars or this kit.

Kit 3: IBTM (iShares iBonds Dec 2032 Term Treasury ETF)

3A. The exact WInS note

```
Future funding and risk management: IBTM does two jobs in Laura's plan. It supports her first $50,000 payment and provides a floor for her facility contribution, giving co-sponsors a minimum figure in 2031. It holds 2032 Treasuries, so the timing fits, although the final payout is not fixed.
```

- 292 characters, 48 words, plain ASCII. Source WNX:19; SH tn_analysis.md R7 matches (re-counted 20 Oct).
- The prefix "Future funding and risk management:" is part of the note.

3B. Order and fill

- **Order as WInS shows it:** 10/06/2026 10:01:41 PM (ET), buy IBTM (WNX:19).
  - For your memory only: Wed 7 Oct 1:01 PM Sydney.
  - It is the last order of the first round (2042 → 2033) and #6 of the 11 filled orders by order time.
  - It was placed after the US close, so it should have filled at the next open (TRD:33).

- **Fill:** 4,503 shares at 21.65 (COMP:176). Cost $97,489.95 plus $25, 32.5% of $300k (arithmetic).
  - The 7 Oct open was 21.65 (PX; VER #25).
  - On the 19 Oct close of 21.865 the holding is worth about $98,458, 32.45% of the book (MODEL book total; NUM §7). Never cite this as a gain.
- **Fill time: UNVERIFIED** (no Transaction History record); probably the 7 Oct open.
- **Two jobs inside one holding** (SH portfolio.md R37-39):
  - 1,142 shares "For the Jan 2033 payment", with the note "Set aside first: the payment comes before the facility";
  - 3,361 shares "For the facility floor".
  - At the fill price: about $24.7k and about $72.8k (arithmetic).

3C. What IBTM is, in plain words

- **What it holds:** a fund that "seeks to track an index of U.S. Treasury bonds maturing in 2032" (ICE 2032 Maturity US Treasury Index) (ISH:223, 252).
- **Fee:** 0.07% a year (ISH:220-222).
- **Size:** net assets $593m on 16 Oct 2026 (ISH:238-240).
- **When it ends:**
  - About 15 Dec 2032, by the iBonds rule "on or about October or December 15 of the year in each Fund's name" (ISH:849).
  - That is about 17 days before the 1 Jan 2033 payment (L05 F-06; VER #45).
  - After that, the fund "will distribute substantially all of its net assets … and will no longer be listed or traded" (ISH:850).
- **Not fixed:** "do not seek to return any predetermined amount" (ISH:850). The note's "the final payout is not fixed" matches the issuer.
- **Why a fund:** WInS lists no individual 2032 Treasury. On 29 Sep: "Not listed … none mature between 15 Feb 2031 and 15 Feb 2036 … Use IBTM for the building minimum (research choice 2)" (SH wins_notes.md R18). "Building minimum" is the Sheet's word; the case says "facility" (Part 0b).
- **Real plan vs WInS:**
  - In Laura's real plan, the 2033-payment rung is bought in Jan 2027 (2027 deposit) and the floor in Jan 2028 (2028 deposit) (IPS line 27).
  - WInS holds both now because it shows the 2 Jan 2028 plan scaled down (SH portfolio.md R2).
- **Distributions:** the 1 Oct ex-date came before the 7 Oct fill, so the book has received no IBTM distribution yet. Next ex/record date Mon 2 Nov, paid Thu 5 Nov (iShares schedule, REG H8); whether and when WInS credits it is UNVERIFIED [consistency fix 20 Oct, row 22]. Don't claim income received.

3D. Facts for "why"

- **One holding, both jobs:** the floor and the first payment both fall due at the start of 2033 (SH portfolio.md, Book note at file line 183: "IBTM also carries the facility floor, because the floor and the first payment are both due on 1 Jan 2033").
- **The 6 Oct Wharton email** (Week-2), quoted in COMP:87-90: "Portfolio construction and recommendations for both contributions may include only approved investment types: eligible stocks, ETFs and Treasury bonds available on WInS."
  - COMP's reading: STRIPS and single zero-coupon Treasuries are out of Laura's real plan.
  - The primary email is not in the repo or on Drive, so its exact text and arrival time are UNVERIFIED (M14 §8; TL row 49).
- **Public rule pages (new in v2):**
  - The 14 Oct snapshot FAQ already said "Investments permitted (for BOTH contributions)" (`smapply_public_2026-10-14/faqs.txt:42`). The insight_v1 fact register quoted that line on 27 Sep and listed it as an open question (TL row 22, TP5).
  - The live FAQ (fetched 19 Oct 13:04 UTC) now reads "Investments permitted (for BOTH contributions, the IPS and Final Report)". Its "NOT permitted" list now names "TIPS (Treasury Inflation-Protected Securities)" and "STRIPS (Separate Trading of Registered Interest and Principal of Securities)" (FAQL:44, 54-55).
  - When the STRIPS line was added is UNVERIFIED. It was absent from the 16 Oct cached copy (`oct19/askwharton/questions_for_wharton.md:63-74`).
  - So STRIPS being out of Laura's plan now rests on a public Wharton page, not only on the quoted email. That does not tell you when the team learned it.

- **Floor in Treasuries, not stocks:** IPS line 30, [acc] "Putting the floor in equities would raise the expected contribution ..." [consistency fix 20 Oct, row 24]. The [pend] run says the same with "so it remains in Treasuries".

3E. Facts for "fit with strategy"

- **The floor is the bottom of the 2031 range** (IPS line 29 [acc]: "The lower bound is the floor, rounded down because a fund's payout is not fixed"). Rounding is D3.
- **Order of purchase in the plan:** payments, then floor, then growth (IPS line 27; [acc] heading "Buy the payments, then the floor, then growth.").
- **In WInS:** IBTM closed the first round, after IBTQ/IBTP/IBTO and before the re-placed bonds, IBTR and VT (Part 0 timing).
- **Concentration:**
  - About a third of the WInS book is in one fund (32.5% at cost; 32.45% on 19 Oct). Treasuries of all kinds are about 90% of the book (NUM §7).
  - [acc] IPS line 27: "Concentration in one issuer is deliberate." [pend] says "concentrated in one issuer with minimal credit risk".
  - Wharton lists "funding purposes" among the ways to think about diversification (TRD:49).
- **The floor's own risks (MODEL, 19 Oct, NUM §4a):**
  - Reinvestment-rate risk is small: a 4-point permanent fall leaves a $150k floor paying about $146.8k.
  - The bigger risk is a ladder top-up shrinking the money left for the floor: about $137-138k after a half-point fall before January (D3, D4).
  - These are Final Report numbers. The TNA does not need facility figures (TNA:20-22).

3F. Facts for "client goals / funding / risk"

- **Case on co-sponsors and credibility:**
  - "Laura plans to begin approaching potential co-sponsors in 2031" (CASE:109)
  - "If Laura promises more than she can ultimately contribute, she could damage her credibility and lose the confidence or participation of co-sponsors" (CASE:114-115). Client_deep §7 suggests the IBTM reflection names this over-promise risk.
  - She "wants to communicate a credible range" (CASE:115-116)
  - "The proposed range must also protect the portfolio's ability to fund the ten-year operating commitment" (CASE:119-120). This matches the payment shares being set aside first (SH portfolio.md R38).
  - The case's own order: "before making the first operating payment or contributing to the facility" (CASE:94).
- **"Meaningful" vs "credible":** the case also wants a contribution that "may signal that the residency is financially viable" (CASE:111-112). A floor that is credible but tiny fails that. Question for the team, not TNA content (CD insight 4).
- **Liquidity:** the cash arrives about 17 days before the 1 Jan 2033 payment. This is the one place the trio can show Wharton's "liquidity" theme (TNA:5; L05 F-06 table).
- **Funding reliability:** first payment = 1 Jan 2033 (CASE:88-89), "toward the residency's operating expenses" (CASE:88).

3G. What the team actually decided, and when (records only)

- **29 Sep:** IBTM recorded as the WInS stand-in for the floor (Sheet: "building minimum") (SH wins_notes.md R18; J:18).
- **1 Oct:** "model check backed the $150k floor and 50/50 split; IPS content locked" (J:21). No names or votes recorded.
- **5 Oct (team journal):** "reviewing the IPS again, we realised the facility floor counted inside the operating reserve. We fixed four phrases and kept 'never below the floor' on purpose (STRIPS in real life, IBTM as the WInS stand-in)." (J:24)
  - This is the only team-side record that the **real-plan** floor was meant to be STRIPS (zero-coupon Treasury strips).
  - Who wrote this line is not recorded.
- **6 Oct:** the Wharton email (COMP:87-90; arrival time UNVERIFIED).
- **6 Oct 10:01:41 PM ET:** IBTM ordered (WNX:19).
- **By 14 Oct:** COMP:155-156 puts Laura's real-plan floor in IBTM ("buy a **floor** in IBTM"), and CLAUDE.md:23 (main) says "The floor is IBTM." COMP is an AI-written onboarding file; no team vote on the switch is recorded.
- **By 19 Oct:** the public FAQ names STRIPS as not permitted (3D).
- **The accepted AI reflection** (IPS line 95) says Wharton's 6 October guidance "ruled out the zero-coupon Treasury we had planned for her floor" (the pending v12 run says "ruled out the zero-coupon Treasuries in our earlier plan"). Partly supported:

- For: J:24 says "STRIPS in real life". ND:346 (unlabelled; probably AI text, UNVERIFIED) proposed "A ladder of zero-coupon Treasuries". (The insight_v1 plan's "the 15-Nov-2032 note or IBTM" is the WInS stand-in, not evidence about the real-plan floor; CLAUDE.md, insight_v1 section.)
- **But in WInS, IBTM was the plan since 29 Sep either way.** The email changed Laura's real plan, not the WInS trade.
- So "the email made us buy IBTM" would be **false**. "The email made IBTM the real floor too" is supported only in COMP, not by a team vote.
- Whether the email arrived before the 10:01 PM ET order is **UNVERIFIED** (TL G7). The "refined" label depends on it (M14 §5 item 1; L05 F-08).

- **Not recorded:**
  - who wrote the IBTM note;
  - whether AI typed any of it at the Preview step, or whether the Sheet's AI-drafted note was its source (TL row 48, L11);
  - who voted for IBTM as a pick;
  - who the author is.

3H. Traps

- **"She already owns" / "owned" / "the minimum she quotes is one she already owns" (AI text):**
  - In 2026 she owns nothing. In her real plan the floor is bought in Jan 2028.
  - A fund's payout is not fixed.
  - Owning the fund is not owning a dollar amount.
- **"guaranteed", "secures", "never below the floor", "locked", "cannot miss the range":** all overclaim next to "payout not fixed". J:24 records that the team kept "never below the floor" on 5 Oct, when the floor was STRIPS; that reason no longer holds.
- **The note's "provides a floor"** reads as present tense and as fixed. Handle it honestly in the reflection; don't repeat it as fact.
- **Double counting:** the same shares can't serve both jobs. The payment shares come first (SH portfolio.md R38).
- **The email-causation claim** (see 3G). Don't say the email caused the WInS trade. Don't claim the FAQ's STRIPS line existed on 6 Oct; its date is unknown.
- **Dollar figures:** no floor amount ($150k, $145k, $138k, $136k), range or contribution in the TNA (TNA:20-22). Follow D3.
- **"So the timing fits" is loose:** the fund's bonds mature across 2032 and the fund ends about 15 Dec 2032. Be precise if you use timing.
- **"building minimum", "minimum gift":** not case words. Use "facility" and "facility contribution" (Part 0b).
- **AI overlap:**
  - The IBTM note shares wording with its AI exemplar ("two jobs in Laura's plan", "It holds 2032 Treasuries"). The team checker gave 30%, a warning (M14 §4 and §5 item 4).
  - Disclose it, and don't reuse exemplar, Tab 15 or [AI] Doc wording.
- **Concentration:** don't call one fund at a third of the book "diversified". The accepted IPS's own word is "deliberate".

3I. Self-test questions (answer aloud)

1. What are IBTM's two jobs? How many WInS shares serve each, which comes first, and why?
2. Why a fund and not a single 2032 Treasury bond? What did you check in WInS, and when?
3. What does "the final payout is not fixed" mean in dollars for the floor? How does the team's rounding rule (D3) deal with it?
4. What exactly did the 6 Oct email change: the WInS trade, or Laura's real plan? What do you know about when it arrived, and what does the live FAQ now say?
5. When does IBTM's cash arrive relative to the first payment, and why does that matter (liquidity)?
6. A judge says "a third of your book in one fund is concentrated". What is your answer?

3J. Self-mark checklist (IBTM)

- [ ] Note pasted from the WInS page for 10/06/2026 10:01:41 PM: 292 characters; prefix kept.
- [ ] 100 words or fewer by two counters (aim for 95 or fewer).
- [ ] Answers why, fit with strategy, and client goals/funding/risk.
- [ ] States the order of the two jobs (payment first), with no double counting.

- [ ] Floor wording matches D3 and the IPS draft; no dollar floor or range.
- [ ] No "owns / already owns / guaranteed / secures / never below / locked / cannot miss".
- [ ] Says nothing about the email causing the WInS trade. Uses "refined" only if D7 (arrival time) is confirmed.
- [ ] Mentions liquidity timing, or the team has decided another pick covers liquidity.
- [ ] Names the over-promise risk in the case's terms (CASE:114-115), in your own words.
- [ ] Says who absorbs a ladder top-up the same way as D4 and the other two reflections.
- [ ] "facility", not "building"; "facility contribution", not "gift".
- [ ] Your own words; nothing from the [AI] Doc reflections, Tab 15, the exemplars or this kit.

Common checks before submitting (all three)

- **Copy and timing:**
  - Copy each note from the WInS Trade Notes page as plain text (Ctrl+Shift+V). Never retype it or "tidy" it; never copy it from a Google Doc, which curls apostrophes (L05 F-13).
  - A second student checks each paste character by character: VT 288, IBTR 294, IBTM 292. Three notes are 288 characters (VT, the cancelled IBTR, the Nov-2041 bond) and two are 294 (IBTR, IBTO), so check ticker, time and wording too.
  - Use ET times exactly as WInS shows them. They are order times, not fill times; never call them execution times and never convert to Sydney time (L05 F-12).
- **Identifiers, if the form wants them outside the 100 words:**
  - Quantities: VT 167 sh, IBTR 853 sh, IBTM 4,503 sh (COMP:176-186).
  - Trade numbers: the Sheet's "Trade #" values (8/9/11) are wrong. By order time among filled orders: IBTM #6, IBTR #10, VT #11 (VER #15). Don't use either without checking what the form means by a number.
  - Whether the SMApply form has date or ticker fields is UNVERIFIED. Open it without submitting first (L05 F-11).
- **Banned-word list** (shared with the IPS editor): guaranteed, risk-free, safe, locked, secured/secures, promised, never, cannot miss, matched, owns/owned, triggered, gift, building. No quotes attributed to Laura; the case pull quote is the case's words (CLAUDE.md).
- **Case words** (Part 0b): payments go toward operating expenses; "creative residency"; capacity split by goal; backstops inside the portfolio; the 2028 deposit as timing.
- **No WInS gain, loss or rank** (TNA:15-16; the case rule against counting WInS P&L). The book is about $303.4k at the 19 Oct close (MODEL bond prices). It moves about $1k a day, and it is not reflection content.
- **Each reflection links to the other two at least once**, so the three read as one strategy (TNA:14-15). Check the theme coverage across the trio (Part 0b).
- **Dated numbers:** any figure carries its close date and basis. The 19 Oct figures here go stale with the 20 Oct close; re-run before using any (D5).
- **After submitting:** list the IPS edits the reflections force (D1-D6). Add nothing new to these trades in WInS.
- **AI policy reading:**
  - The binding competition rules are "You may not submit any work generated by an AI program as your own" and the Works Cited rule (ai-policy :377).
  - "Don't use AI for personal reflection" (:465) sits in the general "Using AI Responsibly" section for coursework. It is strong guidance, not a competition rule (VNO O8).
  - Logging AI use does not make AI text the students' work (TL §5).
- **AI-use log entries the TNA needs** (TL L8, L10-L12, L17, L19):
  - this kit (v1 and v2);
  - the exemplars v1-v12 (17-18 Oct) and the [AI] Doc reflections (accepted v11, pending v12);
  - the Sheet's AI draft and exemplar columns, and the "AUDIT REVIEW — 6 OCT 2026" proposed notes;
  - the ticket tool that printed note words;
  - the AI browser that worked WInS screens, and its 7 Oct mis-click on the May-2038 order.
