Table 1

The Final WInS Portfolio at Cost on the Original $300,000: Laura's Whole Plan in Miniature

Ticker or identifier	Name of investment	Asset type	Units bought / target	Amount ($)	% of total	Pays for
IBTM	iShares iBonds Dec 2032 Term Treasury ETF	ETF	4,503 / 4,503	97,489.95	32.50	2033 and the floor
IBTO	iShares iBonds Dec 2033 Term Treasury ETF	ETF	1,024 / 1,024	23,408.64	7.80	2034
IBTP	iShares iBonds Dec 2034 Term Treasury ETF	ETF	927 / 927	22,155.30	7.39	2035
IBTQ	iShares iBonds Dec 2035 Term Treasury ETF	ETF	894 / 894	20,973.24	6.99	2036
IBTR	iShares iBonds Dec 2036 Term Treasury ETF	ETF	853 / 853	19,823.72	6.61	2037
[ID]	T-Bond 4.750% 15-Feb-2037	Bond	20 / 20	19,203.80	6.40	2038
[532281]	T-Bond 4.500% 15-May-2038	Bond	20 / 20	18,615.26	6.20	2039
[ID]	T-Bond 4.375% 15-Nov-2039	Bond	18 / 18	16,200.95	5.40	2040
[ID]	T-Bond 4.250% 15-Nov-2040	Bond	18 / 18	15,790.32	5.26	2041
[ID]	T-Bond 3.125% 15-Nov-2041	Bond	20 / 20	14,991.00	5.00	2042
	Treasuries for the ten payments and the floor			268,652.18	89.55	
VT	Vanguard Total World Stock ETF	ETF	167 / 164 bought last, from cash left	26,524.61	8.84	Range top, flexibility
N/A	Cash	Cash		3,513.79	1.17	
All holdings				298,690.58	99.56	
Costs at purchase, not a holding: fees and accrued interest				1,309.42	0.44	
Total				**300,000.00**	**100.00**	

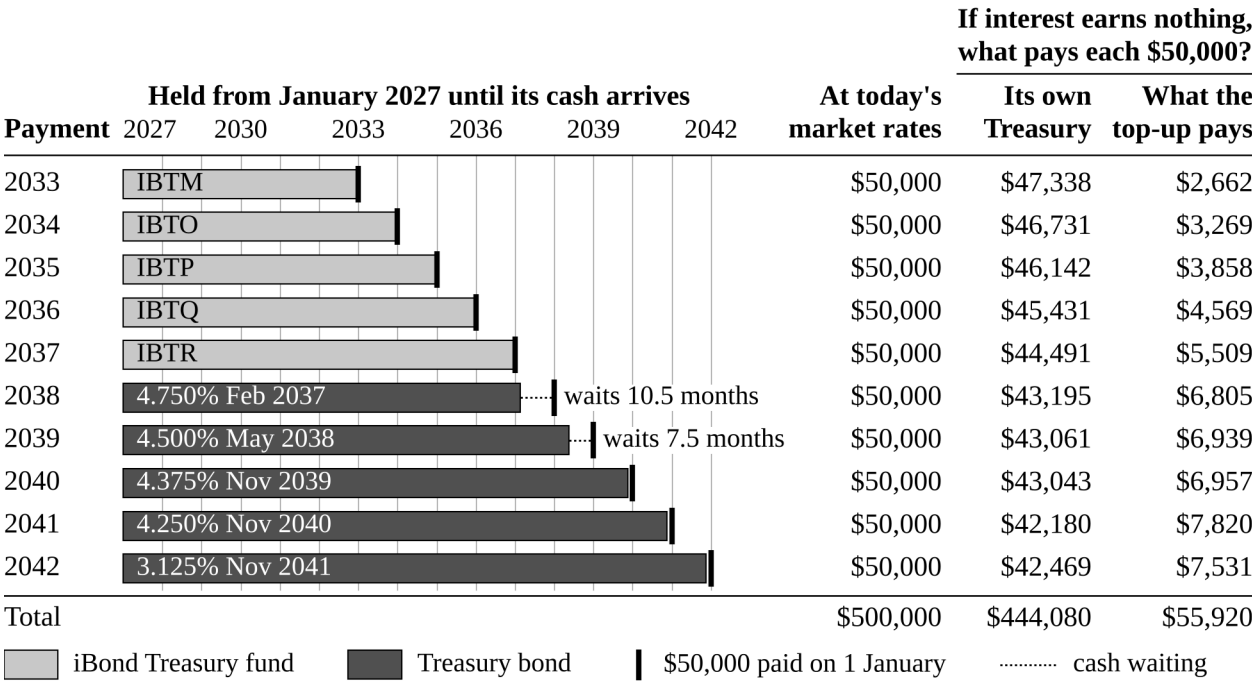

Note. [Note to carry: amounts at cost: units held x price paid on 6-7 Oct 2026 (U.S. Eastern), on the original $300,000 (8g); units bought / target: the targets were set before the first trade (Portfolio tab, 2 Oct prices); a bond unit is $1,000 of face value (8m); the other two targets, met: every bond bought within 25 basis points of the Treasury curve; cash never below $1,000 (8m; SKELETON density cut, 2.5); Pays for: the payment (1 January of that year) each holding stands for (23 Oct snapshot); the floor: the least Laura can promise co-sponsors in 2031, which IBTM stands in for (TNA l.13, CANON A24, 8g); costs row: the $200 of fees and $1,109.42 of bond interest accrued at purchase, which comes back with each bond's next coupon (8g v2).]

Figure 1

Each Payment Has Its Own Treasury, and the Top-Up From the 2028 Deposit Pays Any Gap if Interest Earns Nothing (Laura's Plan for Both Deposits, $450,000, Modelled)

Payment	At today's market rates	If interest earns nothing, what pays each $50,000? Its own Treasury	What the top-up pays
2033	$50,000	$47,338	$2,662
2034	$50,000	$46,731	$3,269
2035	$50,000	$46,142	$3,858
2036	$50,000	$45,431	$4,569
2037	$50,000	$44,491	$5,509
2038	$50,000	$43,195	$6,805
2039	$50,000	$43,061	$6,939
2040	$50,000	$43,043	$6,957
2041	$50,000	$42,180	$7,820
2042	$50,000	$42,469	$7,531
Total	$500,000	$444,080	$55,920

Note. [Note to carry: 1. "if interest earns nothing", defined once: money already received earns nothing while it waits; every coupon and fund payout still counts (WORDS; 8h); 2. the last column reconciled: the top-up's $35,894 (January 2028) buys $36,867 of Treasuries at face; with $19,143 of their own interest, summed undiscounted, they pay $55,920 after $90 of the waiting fund's 0.15% fee; at today's rates about $45,500 comes back (1 Jan 2033 money) (8h); 3. the ratio with its reason: about $1.11 for each $1 on 1 Jan 2033 at today's rates, because the top-up is sized for no interest (8h; card Q31); 4. Treasury par curve of 6 Nov 2026; each payment in its own year's dollars (8h); 5. bars end when the cash reaches Laura: a fund a few days after its 15 December end, a bond on its maturity date or the next business day (8h cash table); 6. if room: paid in every historical rate stretch tested (585 starts, 1962-2010; NUMBERS 2); the top-up's other $2,388 completes the ten, in "Its own Treasury"; rows may not add because of rounding.]

Table 2

Laura's Plan for Both Deposits ($450,000) in Five Markets and in History Since 1962, Modelled

World	Ten payments	Stated in 2031		Flexibility (Jan 2033)
		Bottom	Top	
Today's forward rates	All paid	$95,000	$115,000	$29,800
Replay from 2006: shares fall	All paid	$95,000	$105,000	$19,500
Rates 3 points lower for good	All paid	$80,000	$95,000	$21,100
Replay from 2007: rates fall early	All paid	$80,000	$95,000	$21,900
Inflation: rates 3 points higher	All paid	$100,000	$120,000	$23,600
All 585 history replays (1962-2010 starts)				
1-in-20 low	All paid	$80,000	$95,000	$19,700
Median	All paid	$95,000	$115,000	$31,800
1-in-20 high	All paid	$115,000	$140,000	$49,600

In every world and every replay, the facility contribution in January 2033 equals the stated top.

Note. [Note to carry: MODEL, not forecasts; Treasury curve of 6 Nov 2026; shares 7.5% a year in rows 1 and 3; replays: U.S. yields and stocks from the start month (method in 3e); inflation row: prices up 5% a year; flexibility: the half of VT promised to no one plus whatever the funds pay above the stated top, to the nearest $100 (8i); spread rows: each column's own percentile; each row is a different market before January 2028; within each, the bottom is fixed from then.]

Table 3

Seven Signals to Watch as 2031 and 2033 Approach; Two Can Change Laura's $450,000 Plan

Signal	Reader	Carry on while	Look closer or act when	What it changes; what it never changes
The two reasons to change the plan				
The 2028 deposit ($150,000)	Laura	Confirmed by 1 Dec 2027; the $38,282 top-up first	Nothing received by 31 March 2028 (a missed deposit)	*Changes:* no range; the 2033 payment $3,016 short. *Never:* a sale.
Treasury payments	Team	Paid on the due date, moved past holidays	A Treasury default: a payment over five business days late	*Changes:* what the Treasuries pay, restated. *Never:* a forced sale.
Look closer: a date or an instrument may change, never the plan				
The debt limit's X-date	Team	No X-date within a month of a cash date	An X-date within a month of a payout, maturity or trade day	*Changes:* nothing before it (a late payment is row 2). *Never:* a sale ahead of it.
iBond fund notices, the floor's too	Team	Cash in 4 to 9 business days before the year's last (4 to 6 for 2036)	A notice that moves a fund's end date past a payment	*Changes:* the fund, for a Treasury due in time, paid from the reserve. *Never:* the amount; the shares.
Trade days: Mon 4 Jan 2027, Mon 3 Jan 2028	Team	Limit orders near each fund's net asset value	A date cannot be kept (a halt; a first draw after January 2033)	*Changes:* a date, by days. *Never:* the step or its order.
Watch: the plan carries on				
Treasury yields and share prices	Team	Any level: a fall in the market is not a reason	None. 2 points lower before 2027: a $60,000 bottom; 3.60 lower: the top-up takes the whole deposit	*Changes:* prices until each end is bought, then her flexibility. *Never:* the payments, to a 3.60 fall.
Her flexibility's three uses	Laura	US$1 = NT$32.768; construction cost index up 1.5% to 5.0% a year	A Taiwan dollar 10% stronger ($11,500 more on $115,000)	*Changes:* a call on her flexibility ($29,800 today). *Never:* the range.

Note. [Note to carry: today's market rates (curve of 6 Nov 2026); the top-up: $2,388 the ten still lack plus $35,894 so each payment is met if money received earns nothing (January 2028 dollars); X-date: Treasury's estimate, else CBO's; Team: Wharton's "her asset management team".]
